

## Microwave sterilization equipment

### What' s the characteristics of microwave sterilization equipment worthy of selection?

1. Microwave processing time is greatly shortened, featuring short time and fast speed.
2. Our microwave sterilization equipment can be sterilized at a lower temperature to maintain the nutrient content and traditional flavor of the material.
3. Our Leader Company guarantees that the microwave acts directly on the food, without additional thermal energy loss, and maximally saves energy.
4. The surface and the interior are simultaneously affected, so the sterilization is uniform and fully.
5. The equipment is flexible and easy to control.
- 6, We ensure that our equipment ( Whether microwave sterilization equipment or other microwave dehydration equipment to) is simple, no boiler, complex piping system. Only need the water, electricity basic conditions can be.
7. Improve working conditions and save floor space.

			
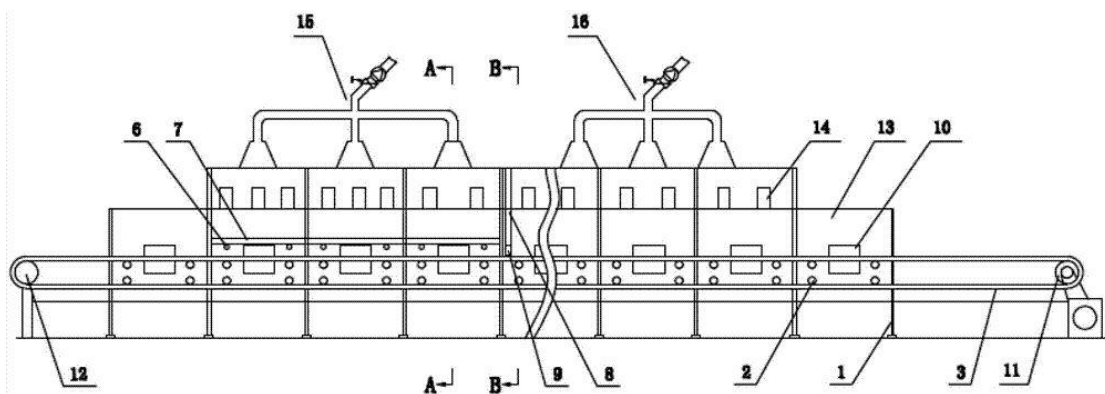

10kw Microwave sterilization equipment	20KW Microwave sterilization equipment	30kw Microwave sterilization equipment	Higher power customizable

### Product Specification:

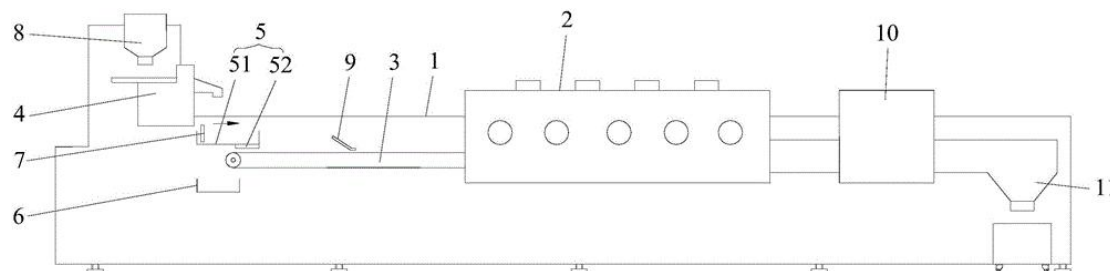

Condition	New	Certificate	CE
Automatic rating	Automatic	Guarantee	12months
Production Capacity	500kg/h	After-sales service	Installation, Debugging, Training at customer' s factory
Place of origin	Mainland China	product name	Microwave sterilization equipment
Brand	LD	control system	PLC
Item no	LD - 60KVV	Place of delivery	Jinan-Shandong-China

Voltage	220V~380V	Capacity	600-700kg/h
(W) Power	60KW	Color	Sliver white
(L*W*H) Size	12860 * 1060 *1750mm	Weight	2T

Microwave sterilization technology, as one of the ten freshening technologies, is an effective sterilization method which can ensure the safety of products. The technology of microwave sterilization is widely applied in the area of the food industry for its rapid temperature elevation, high efficiency, safety, and nutrition preservation. Our microwave food sterilization machine has enjoyed great popularity in the wide food processing industry. Microwave sterilizing machine is the most suitable machine for semi-liquid, powder and granular products.

Is food processed in microwave safe for consumers? Yes, the food processed by this novel technology is safe for consumption. “Because the microwave energy is changed to heat as soon as it is absorbed by the food, it cannot make the food radioactive or contaminated. When the microwave energy is turned off and the food is removed from the oven, there is no residual radiation remaining in the food. In this regard, a microwave oven is much like an electric light that stops glowing when it is turned off.”

Automatic Grading	Automatically	Guarantee	One year
Model	LD - 60KWV	place of production	Jinan - Shandong - China
Power (W)	60KW	Color	Silvery white
Weight	2T	After-sale service	Installation, commissioning and training

For manufacturers who want to sterilize food, medicine and other materials, microwave sterilization equipment is an opportunity. We sincerely hope that Leader Microwave Sterilization Equipment can help you solve the problem of food sterilization and disinfection. With the protection of the environment, our equipment will never emit any waste gas or waste water during the process. It is the leader in the new era of high technology. . If you are interested in our microwave equipment, you can click on it for more information. If you have any other questions about microwave sterilization, you can leave a message to us.
